- Ground & Air Source Heat Pumps

Design Service

Full design of various systems can be provided together with specifications. Careful selection and application of the latest technologically advanced equipment ensures that optimum energy and performance standards can be achieved.

Refurbishment Specialists

Refurbishment and upgrading of building services installations can bring many challenges. Our vast experience in this field enables us to approach each working environment with a positive and focused goal to minimize disruption and accommodate our customers requirements wherever possible. We specialise in upgrading and replacing all types of mechanical plant equipment and installations.

MAINTENANCE

The maintenance division of the company provides planned and reactive maintenance for mechanical services across the UK.

We provide maintenance in the following areas:

- **Boiler Plant Servicing (Gas/Oil/LPG/Biomass)**
- **Pressurisation Units**
- **Pumps & Booster Units**
- **Plate Heat Exchangers**
- **Gas Safety Certification**
- **Gas Boosters**
- **Heat Recovery**
- **Hot Water Storage Vessels**
- **Air Conditioning Systems**
- **Ventilation & Warm Air Systems**
- **Radiant Heating**
- **Controls Systems**
- **Building Control Systems**
- **Ground & Air Source Heat Pumps**

Service agreements are provided and tailored to individual customer requirements. The agreements detail scheduled planned maintenance programme periods together with a plant asset inventory, detail of work required, special access requirements and frequency of visits.

From plant servicing and certification, engineers inspections and condition reports we provide a comprehensive planned maintenance package to suit our customers requirements.

Our customers benefit from emergency and reactive call out facilities
